**DETAILED ACTION**

***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with ELCHUK, MARK (Reg. No. 33686) on 6/11/09.

The claims have been amended as follows:

Claims 5, 14 are cancelled.

1. (Currently Amended) A method of geo-casting a message to a plurality of recipients each having an address and a known geographic location, comprising: reporting the current locations and addresses of the plurality of recipients to a geospatial database; designating an arbitrary geographic region to transmit the message to by reference to a physical structure within the geographic region; determining the addresses of the recipients that are located within the geographic region by using the geospatial database to compare the current reported locations of the recipients with the reference to the structure, the address of at least one of the recipients being ~~a wide area network~~—an internet protocol (IP) address;

changing the wide area network address of the recipient to dynamically obtain a new ~~wide area network~~ IP address due to movement of the recipient; and transmitting the message to the addresses of each of the recipients having current locations within the geographic region by serially unicasting the message, over a mobile ad hoc network.

operating a computer at an OSI application level.

12. (Currently Amended) A telecommunication system comprising:

a mobile ad hoc network;

a transmitter connected to the network;

a memory containing a geospatial database and in communication with the transmitter;

a plurality of receivers including at least one mobile receiver, each of the plurality of receivers including a current address and a location in a geographic area and reporting the current address and the location to the geospatial database on a selected frequency; and

the transmitter enables reception of a message and a geographic destination designator that designates a geographic destination for the message, and further enables access to the geospatial database to identify the addresses of the receivers in the geographic destination to transmit the message to the identified receivers within that geographic destination based on the reported address for each said identified receiver, the geographic destination comprising a geographic region arbitrarily defined by

reference to one or more physical structures within the geographic region, the transmitter enabling transmission of the message as a series of unicast messages to the identified receivers.

operating a computer at an OSI application level.

22. (Currently Amended) A telecommunication system comprising:

a mobile ad hoc network;

a transmitter connected to the network;

a memory containing a geospatial database and in communication with the transmitter;

a plurality of receivers including at least one mobile receiver, each of the plurality of receivers including an address and a location within a geographic area and reporting the current address and the location of the mobile receiver to the geospatial database, at least one of the addresses being a wide area network address which changes; and the transmitter enabling operation at an OSI application level to receive a message and a geographic destination designator that designates an arbitrarily defined geographic destination for the message, the geographic destination defined by at least one physical structure in the geographic destination and that enables access to the geospatial database to identify the addresses of the receivers currently reported to be in the geographic destination, to transmit the message to the identified receivers within the geographic destination based on their reported current address, and that enables

transmission of the message as a series of unicast messages to the identified receivers within the geographic destination.

operating a computer at an OSI application level.

23. (Currently Amended) A method of geo-casting a message to a plurality of recipients each having an address and a known geographic location comprising: reporting the current location and address of the recipients to a geospatial database;

transmitting a message to at least one selected recipient based on their geographic location by:

- (1) arbitrarily designating a geographic region for receipt of the message by reference to a plurality of physical structures in the geographic region;
- (2) determining the recipients that are within the geographic region by comparing the current reported locations of the recipients to the geographic region; and
- (3) serially unicasting the message to the addresses of the recipients that are located within the geographic region over a mobile ad hoc network.

operating a computer at an OSI application level.

***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

Claims 5-6, 8, 14-15, are cancelled.

Claims 1-4, 7, 9-13, 16-23 (renumbered as 1-18 respectively) are patentable.

The entire prior-art combination **disclosed** (in previous office-action of this case) fails to anticipate or render the claimed limitations in combination with all the recited limitations of the disclosed independent claims obvious (**viewed the entire claim as a whole**), over any of the prior art of record, alone or in combination.

Consequently, the disclosed independent claims are allowed on behalf of above-discussed reasons, and also preserved via Applicants arguments and remarks filed on 01/26/2009 as well. Since the disclosed dependent claims are dependant on one of the above independent claims, therefore they are also patentable.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
